```
11. PATHWAY: CYCLIC peptide antibiotic bacitracin biosynthesis.
12. SIBUNIT: LARGE MULTIERZYME COMPLEX OF BAI, BA2 AND BA3.
13. SIBUNIT: LARGE MULTIERZYME COMPLEX OF BAI, BA2 AND BA3.
14. SOBUNIT: LARGE MULTIERZYME COMPLEX OF BAI, BA2 AND BA3.
15. 1- DOMAIN: CONSISTS OF FIVE MODDLES, AND A DUTATIVE C-TERMINAL
15. THE DESTINERASE DOMAIN. EACH MODULE INCORPORATES ONE AMINO ACID INTO
16. THE DESTINE FROUGT AND CAN BE FUGTHER SUBDIVIDED INTO DOMAINS.
17. RESPONSIBLE FOR SUBSTRATE AND CAN EPIMERIZATION (OPTIONAL).
17. METATION (OPTIONAL).
18. MISCELLANBOUS: BACITRACIN IS A MIXTURE OF AT LEAST TEN CYCLIC
19. MISCELLANBOUS: BACITRACIN A, BRANCHED CYCLIC DODECAPEPTIDE: IT
17. CONTAINS AN N-TERMINAL LINEAR PENTAPEPTIDE MOIETY (ILE-CYS-LEU-D-
17. GLU-ILE) WITH AN ISOLEUCINE-CYSTEINE THIAZOLINE CONDENSATION
17. CONTAINS FOUR FIRE FREE ALPHA-CARBOXY GROUP OF THE C-
18. TERMINAL ASN IS BOUND TO THE EPSILON-AMINO GROUP OF LYSINE: IT
18. DECOMPANINS FOUR AMINO ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANINS AND AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANINS AND AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANINS AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7), DECOMPANING FOUR AND ACIDS IN THE D-CONFIGURATION (GLU-4, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. 15-JUL-1999 (Rel. 41, Last annotation update)
Bacitracin synthetase 3 (BA3) [Includes: ATP-dependent isoleucine
adenylase (IneA) (Isoleucine activase); ATP-dependent D-phenylalanine
adenylase (D-PheA) (D-phenylalanine activase); ATP-dependent histidine
adenylase (D-SAPA) (Histidine activase); ATP-dependent histidine
adenylase (D-AspA) (C-aspartate activase); ATP-dependent asparagine
adenylase (BC 5.1.13); Phenylalanine activase); ASPATtate racemase
(EC 5.1.13); Phenylalanine racemase [ATP hydrolyzing]
BACC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -i- CATALYTIC ACTIVITY: L-aspartate = D-aspartate.
-i- CATALYTIC ACTIVITY: ATP + L-phenylalanine = AMP + diphosphate + D-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chem. Biol. 4'927-937(1997).
-i- FUNCTION: INDUCES PEPTIDE SYNTHESIS, ACTIVATES AND INCORPORATES
FIVE AMINO ACIDS, FORMS A THIAZOLINE RING BETWEEN THE FIRST TWO
AMINO ACIDS AND INCOPORATES A D-GLUTAMINE IN THE FOURTH POSITION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Konz D., Klens A., Schoergendorfer K., Marahiel M.A.;
"The bacitracin biosynthesis operon of Bacillus licheniformis ATCC
10716: molecular characterization of three multi-modular peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SIMILARITY: BELONGS TO THE ATP-DEPENDENT AMP-BINDING ENZYME
